**National Waste Consulting
delivers truly independent
waste management and
recycling advice for
commercial clients**

Our goal is to help bridge the gap between our clients and their potential waste provider. We will represent your interests independently to ensure targeted cost savings as well as improved environmental performance are met.

We have over 10 years' experience providing clients waste management and recycling solutions across Australia, helping companies of all sizes manage their waste and recycling, specifically in the following areas:

- Tender management
- Waste / recycling audits
- Contract Management
- Recycling advice and trading
- Invoice reviews
- Waste equipment advice
- General consulting and advice

Tender management

National Waste Consulting provides services across the entire tendering process and can be tailored to suit your individual needs. These could include:

- Brainstorming with key stakeholders the critical elements to be included in tender documents, to attract relevant and competitive offers
- Conducting site audits at flagship sites for accurate data
- Releasing tender documents to the market
- Tender evaluation and short listing potential candidates
- Organising and attending presentations
- Providing general tender advice
- A final report will be provided with our recommendations including detailed safety, financial and environmental results
- Contract implementation
(See our Contract Management service for ongoing support after your services start)

Waste Auditing

National Waste Consulting believes a crucial component to improving businesses' sustainability results lies in understanding their waste and recycling.

If you do not understand your current baseline volumes and types of waste streams, then it's near impossible to set effective waste reduction targets and implement focused programs to deliver improvements.

Some companies are not aware that their general waste can be up to 80% recyclable. The best way to achieve a true picture is via a waste audit.

Our waste audit provides quantified information about each waste material composition and its origin. Waste audits will benefit your organisation when you have decided to improve your environmental performance or diversion from landfill. Not to mention the fact that recycling saves money.

We can provide audits to all industry types including hospitality, food & beverage, health, office spaces, transport and logistics, commercial and industrial.

Contract Management

At contract implementation and anytime throughout a contract, National Waste Consultants can take responsibility of contract management ensuring that contract obligations are met and any price increases are fair and honest. With our in depth knowledge of the industry, we know what is reasonable and fair for both parties to ensure a long term partnership and a contract with favourable outcomes.

Below are some of the areas we can focus, manage and report back to you:

- Overall contract performance
- Financial KPI's
- Recycling KPI's
- Service KPI's
- Annual rate reviews
- Periodic or adhoc invoice reviews
- Market trends and innovations
- New technology
- Cost benefit analysis
- Waste Management Plan development and implementation

Waste Equipment Advice

National Waste Consulting ensures the equipment recommended is the best fit for your business. We look at external factors such as labour cost, power requirement costs and future business forecasts. As part of our service we will also recommend purchase or lease options from various equipment suppliers across Australia.

Below are our areas of expertise:

- Compactors
- Balers
- Shredders
- Plastic Cleaning Recycling Plants
- Tyre Recycling Plants
- Organic Recycling Machines
- Front Lift Bins
- Rear Lift Bins
- Bulk or Skip Bins
- Internal Bins
- Stands and Frames

Recycling

Many businesses are unable to find solutions to recycle difficult waste streams. True to our philosophy of industrial ecology, at National Waste Consulting, we will investigate various options across the market to provide you with a viable solution.

The demand for more advanced recycling options continues to grow as companies are setting zero waste to landfill targets. We have researched and partnered with many recycling plants across Australia and Asia to deliver the best financial and environmental outcomes for our clients.

National Waste Consulting specialise in the following recycling products:

- Contaminated plastics (LDPE, HDPE, PP, PET, HIPS)
- Tetra Pak – Liquid paperboard
- Stock Rolls
- Label Backing Rolls
- Cardboard and Paper
- Confidential Paper Destruction
- Hard and soft plastics
- Organics
- Steel
- Pallet Recycling/Reuse
- E-waste
- Tyres
- Timber and plastic pallets

Our philosophy

National Waste Consulting considers industrial ecology important for our future and for our businesses.

Also known as the science of sustainability, industrial ecology studies industrial systems within the built environment with the goal of finding ways to lessen their environmental impact.

Many companies are now focused on incorporating industrial ecology into their business to reduce the use of natural resources and generate less waste.

Our goal is to take clients from problems to solutions, and instil confidence that cost savings and environmental performance targets are reached.

We believe in long term partnerships with our clients with clear set objectives from the start. Our experience, enthusiasm and approach will ensure you have long-standing and beneficial partnerships with your waste provider and National Waste Consulting.
